

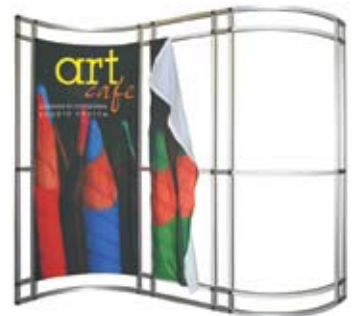

graphic fabric™ installation

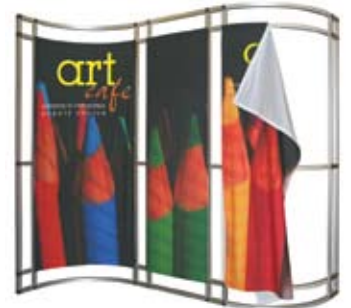

1: The RasterPrint™ graphic attaches to the structure with Velcro®. Be sure that the hook Velcro® surfaces on the structure are all facing the front of the unit. This is especially important with the curved pieces as, unlike the straight pieces, they cannot be rotated once assembled. Start by installing the left graphic panel. Start the installation in the upper corner as shown and work your way across, then down the sides keeping the graphic taut as you go. Attach the bottom edge last.

2: Install the center graphic panel in the same manner.

3: Install the right graphic panel in the same manner.

Optional Full Coverage Graphic Fabric™

Start installing the graphic in the upper corner as shown. Attach the top edge and then the sides keeping the graphic taut as you go. Finally attach the bottom edge.
